

Amendments to the Specification:

Please replace paragraph [0028] of the specification with the following rewritten paragraph (deleted text being struck through and added text being underlined):

A Each support 12 may include a foot 14, and an upright 16, which may comprise a lower upright 18 and an upper upright 20. In the preferred embodiment two supports 12 are present as additional supports 12 get in the way of the user and a single support 12 generally uses a larger than desired foot 14 and may require user interaction for stability, although such a design is plausible. The foot 14 may have any configuration. The shape shown is a cross shape with the longer portion extending rearward for support. The foot 14 may be design to disassemble for reducing package size. The upper upright 20 may be rotationally joined to the lower upright 18 with a connector 24, allowing the user to orient the sheet goods 70 at the most desired angle for their work. Fasteners 22, preferably C-shaped portions are joined to the support and are adapted to receive the carriage 30.

Amendments to the Abstract:

Please replace the paragraph of the Abstract with the following rewritten paragraph (deleted text being struck through and added text being underlined):

A2 A cutting stand for sheet goods ~~including~~ is disclosed that includes supports, with each support including a foot, a lower upright joined to the foot and an angled upper support joined to the lower support, The cutting stand additionally includes a carriage joined to the supports, and sheet goods may be removably mounted on the carriage, ~~and~~ The cutting stand also includes a guide movably joined to sheet goods, and the guide is adapted to be removable from the sheet goods.
